Swell Spotlight

We've been updating our Swell Spots in response to your suggestions.

One of the things we've heard is that you want Swell Spots to be more durable. We will now be making them from the same high quality fabric as Tribute garments and we expect that they should last twice as long. This means that most spots will be black on one side and grey on the other, with the exception of those spots meant for the breast, which will be all grey to accommodate bilateral usage.

Some spots have also been redesigned to make them more versatile and easier to use. The palmar spots have new channels and the large palmar can now also be used on the dorsum of the hand, which is good news for fans of the old style small dorsal spot.

In response to therapists requests we've also redesigned our breast swell spots. Each spot will now fit two cup sizes to accommodate girth differences as swelling resolves. We will now be using the following codes: SP-09-S (for cups A & B), SP-09-M (for cups C & D) and SP-09-L (for cups D & DD).

We'a Toes have also been updated to be more proportionate and to increase comfort.

We will be eliminating Digi-Wraps from the Swell Spot line and moving them into our orthopedic line.

Watch for new catalogs coming out in spring which will include three NEW Swell Spot designs. If you have a design in mind, now is the time to let us know! Remember, if we put your design into production you choose the name, and you'll also receive twelve of your spots for free!

As always we welcome your feedback. It is you whose ideas help us make the best products we can.
